

Check if Key Exists in Dictionary (if)

```
student = {"name": "Amit", "age": 20}
```

```
if "age" in student:  
    print("Age is present")
```

② Count Frequency of Characters in a String (for + if-else)

```
text = "python"  
freq = {}
```

```
for ch in text:  
    if ch in freq:  
        freq[ch] += 1  
    else:  
        freq[ch] = 1
```

```
print(freq)
```

③ Find Student Grade Using Dictionary (if-elif)

```
marks = {"Math": 85, "Science": 72}
```

```
for subject, score in marks.items():
    if score >= 80:
        grade = "A"
    elif score >= 60:
        grade = "B"
    else:
        grade = "C"
    print(subject, ":", grade)
```

4 Print Only Even Values from Dictionary (for + if)

```
data = {"a": 10, "b": 15, "c": 20}
```

```
for key in data:
    if data[key] % 2 == 0:
        print(key, data[key])
```

5 Sum of All Values in Dictionary (for)

```
prices = {"pen": 10, "book": 50, "bag": 200}
total = 0
```

```
for value in prices.values():
```

```
total += value
```

```
print("Total =", total)
```

❏ **6 Menu-Driven Dictionary Program (while + if-elif)**

```
student = {}
```

```
while True:
```

```
    print("1.Add 2.Display 3.Exit")
```

```
    choice = int(input("Enter choice: "))
```

```
    if choice == 1:
```

```
        key = input("Enter key: ")
```

```
        value = input("Enter value: ")
```

```
        student[key] = value
```

```
    elif choice == 2:
```

```
        print(student)
```

```
    elif choice == 3:
```

```
        break
```

7 Find Maximum Value in Dictionary (for + if)

```
marks = {"A": 78, "B": 90, "C": 85}
max_mark = 0
```

```
for m in marks.values():
    if m > max_mark:
        max_mark = m
```

```
print("Highest mark:", max_mark)
```

8 Remove Key if Present (if-else)

```
data = {"x": 1, "y": 2}
```

```
key = "y"
if key in data:
    del data[key]
else:
    print("Key not found")
```

```
print(data)
```

9 Print Dictionary Using while Loop

```
data = {"a": 10, "b": 20, "c": 30}
keys = list(data.keys())
i = 0
```

```
while i < len(keys):
    print(keys[i], ":", data[keys[i]])
    i += 1
```

10 Skip Specific Key Using continue

```
marks = {"Math": 80, "Sci": 70, "Eng": 60}

for sub in marks:
    if sub == "Sci":
        continue
    print(sub, marks[sub])
```
