

1. Create and Display a List

```
numbers = [10, 20, 30, 40]  
print(numbers)
```

◆ 2. Find Length of a List

```
numbers = [1, 2, 3, 4, 5]  
print("Length of list:", len(numbers))
```

◆ 3. Access Elements Using Index

```
numbers = [5, 10, 15, 20]  
print("First element:", numbers[0])  
print("Last element:", numbers[-1])
```

◆ 4. Add Elements to a List

```
numbers = [1, 2, 3]  
numbers.append(4)  
numbers.insert(1, 10)  
print(numbers)
```

◆ 5. Remove Elements from a List

```
numbers = [10, 20, 30, 40]  
numbers.remove(20)  
numbers.pop()
```

```
print(numbers)
```

◆ 6. Sum of List Elements Using for Loop

```
numbers = [1, 2, 3, 4, 5]  
total = 0
```

```
for i in numbers:  
    total += i
```

```
print("Sum:", total)
```

◆ 7. Find Maximum and Minimum in a List

```
numbers = [25, 10, 45, 30]  
print("Maximum:", max(numbers))  
print("Minimum:", min(numbers))
```

◆ 8. Count Even and Odd Numbers in a List

```
numbers = [1, 2, 3, 4, 5, 6]  
even = 0  
odd = 0
```

```
for i in numbers:  
    if i % 2 == 0:  
        even += 1
```

```
    else:
        odd += 1

print("Even:", even)
print("Odd:", odd)
```

◆ 9. Reverse a List Using Loop

```
numbers = [1, 2, 3, 4]
rev = []

for i in numbers:
    rev.insert(0, i)

print("Reversed list:", rev)
```

◆ 10. Search an Element in a List

```
numbers = [10, 20, 30, 40]
key = int(input("Enter element to search: "))

if key in numbers:
    print("Element found")
else:
    print("Element not found")
```

◆ 11. Remove Duplicate Elements from a List

```
numbers = [1, 2, 2, 3, 4, 4]
unique = []
```

```
for i in numbers:
    if i not in unique:
        unique.append(i)
```

```
print("List without duplicates:", unique)
```

◆ 12. Create a List of Squares

```
squares = []
```

```
for i in range(1, 6):
    squares.append(i * i)
```

```
print(squares)
```
